

SmartLock Seal! GA &

The SmartLock Seal is a fixed length seal manufactured from strong & flexible polypropylene material.

The design features a strong single point locking mechanism and an indicator which protrudes through a hole in the underside of the locking head, signifying that the seal has been properly locked.

The seal also features a break off point for easy tool-less removal; making this seal suitable for most applications.

The SmartLock Seal is available in two lengths:

- SmartLock I - 5" (13cm) Strap length (4.45" usable, 6.4" overall seal length)
- SmartLock II - 9" (24cm) Strap length (8.78" usable, 10.75" overall seal length)

Average breaking strength:

- 28 lbs (13kg)

Seals are available in a variety of pastel colors and are laser engraved for increased tamper resistance. Custom engraving options include: company name, serial numbering, logos, barcoding, and "duplicate numbering" for totes or for applications that require same number seal sets.

Common Applications:

- Airline carts and cargo
- Trailers, containers, railcars
- Refineries, chemical plants, grain elevators
- Fire doors, lockers, totes, evidence bins
